

TOWN HIGHWAY GARAGE

SOUTH BRISTOL, NEW YORK

COMPLETION DATE
2020

LOCATION
South Bristol, New York

CLIENT
Town of South Bristol

MRB Group collaborated with officials and staff of the Town of South Bristol over a two-year project schedule to replace its aged highway garage with a new, modern 13,000 sf facility.

Special consideration was given to siting the new structure on the existing highway campus in a manner that would maximize site utilization, better support general highway department operational needs, and minimize interference with ongoing operations during construction.

The new building was designed with interior fire-rated walls, allowing the town to avoid the additional expense of a costly new water supply source, which would be required for an automatic fire suppression system.

Design considerations included providing space for future growth, as well as utilizing materials that will reduce long term maintenance costs and increase energy efficiency.

MRB Group provided comprehensive services including:

- Existing building assessment
- Inventory of existing structures and site conditions
- Building programming
- Conceptual and schematic design
- Design development and construction documentation
- Public bidding and assistance throughout the contract award
- Construction administration services
